

Deliver training to every official, on a platform that's already live.

PREPARED FOR OFFICIALS MANAGEMENT SYSTEMS. SEPTEMBER 2026. CONFIDENTIAL.

GetMatchReady certifies referees in production today. This proposal lays out two ways to put it to work: license it, or own it later, with me building it into your multi-sport platform. Both give you exclusive use of the same platform. What changes is ownership. Buying is always optional, never required.

THE OFFER

Two ways forward

	License	License-to-Own ★
Headline	\$45,000/yr + \$8,000 setup	\$120,000 to own after year one
Setup & integration	\$8,000	\$8,000
Annual license (current reach)	\$45,000	\$45,000 (year 1)
Each new sport beyond soccer	\$10,000/yr	\$10,000/yr
Purchase price	-	\$165,000
License fees credited	-	100%
Growth payments after purchase	-	\$10,000/sport, cap \$40,000
Payment	Annual	Installments, up to 12 mo
Obligation to buy	None	None
Dev & support	\$2,000/mo (optional)	\$2,000/mo (optional)
Ownership transfers	Stays with GetMatchReady	On final payment

My recommendation: License-to-Own. You start with a license, try it risk-free for a full year, and every license dollar credits toward owning it. Zero obligation to buy.

The license covers your current reach across soccer, about \$0.60 per official per year. The growth plan is simple: each new sport is \$10,000 a year. The base only steps up if your officials count grows dramatically, and we would set that together.

Scope. NCYSA and NCSRA are excluded from this agreement. GetMatchReady continues to operate their learning systems, and any exclusivity covers your sports and markets only, not organizations GetMatchReady already serves.

WHY NOW

The complete system, for less than any other path

OMS does not just need a SCORM player. It needs the whole system: a branded referee portal, the modules, the signed integration with OMS, certificates and reporting. Here is what that complete system costs over three years at about 75,000 officials, every way you could get it, and who owns it at the end.

Path to the complete system	3-year cost	Owns it at the end
SCORM Cloud player, plus building the rest	~\$330,000 to \$430,000	No

Path to the complete system	3-year cost	Owns it at the end
Enterprise LMS (Docebo, Absorb) + integration	~\$300,000 to \$600,000	No
Build it all in-house	~\$250,000 to \$400,000	Yes, after 6+ months
GetMatchReady license	~\$143,000	No
GetMatchReady, buy after year one	~\$173,000	Yes, live today

GetMatchReady is the complete system, live today, for less than any way to build or assemble it, and it is the only turnkey option you can own. Optional support (\$2,000/mo) adds a dedicated developer, which no rented service includes.

SCORM Cloud is only the player. Its Ultra plan, the tier that covers a concentrated recertification season (up to 50,000 registrations a month), is \$5,000 a month, about \$180,000 over three years; the rest of that row is a conservative \$150,000 to \$250,000 to build and run the portal, OMS integration, certificates and reporting it does not include. Enterprise-LMS and in-house figures are market estimates at about 75,000 officials, not quotes. GetMatchReady figures are firm and include the \$8,000 setup: \$45,000/yr to license, or \$165,000 plus setup to own.

HOSTING

The video bill stays small

OMS asked about AWS. GetMatchReady already streams the same video through Bunny CDN, a fraction of AWS CloudFront's rate, billed to you at actual cost either way. Estimated at roughly 75 TB/year at current reach (about 1 GB per official across 75,000 officials), and it scales as you grow.

AWS CloudFront What OMS was considering ~\$6,000 to \$9,000 / yr	Bunny CDN What GetMatchReady uses ~\$750 to \$1,800 / yr
--	--

Bunny CDN delivers the same video for roughly **3 to 8 times less** than AWS CloudFront, about **\$5,000 to \$7,000 saved per year** at current reach, and the gap grows as you scale.

WHAT YOU GET

A finished platform, not a starting point

Everything below is built and running today, and the full loop, from a signed launch to a completed module to the result posted back into your system, was tested end to end with your team. These are not roadmap promises.

Full upload automation

Your system sends new SCORM lessons to the platform through our API. We unpack, host, and serve them. Nothing sent by hand.

Preview before go-live

New lessons arrive as drafts you preview with a launch link, and go live only when you choose.

Genuine completion

Real watch and finish time. Pass, fail, and score, not a click-through.

Resume anywhere

Officials pick up exactly where they left off, on any device.

Video on a global CDN

Large modules load fast; video is offloaded automatically.

Several of these, self-service upload automation, a dedicated developer, and per-organization cost tracking, are capabilities enterprise vendors bill as paid add-ons. Here they are included.

Certificates built in

Issued on completion, branded per organization.

No JavaScript for your team

A signed launch link in, a signed completion webhook out.

Hosting billed at cost

Storage and CDN usage are tracked per organization and passed through at actual cost, no markup.

Reconcile any time

Pull completion status on demand to match your records, and every upload is logged.

A dedicated builder

Me, growing it into basketball, football, and beyond.

Cost figures are estimates from published pricing and typical build-and-run costs, checked September 2026. Sources: [Rustici SCORM Cloud pricing](#), [Bunny CDN pricing](#), [AWS CloudFront pricing](#).
