PARTNERSHIP PROPOSAL

Deliver training to every official, on a platform that's already live.

GetMatchReady certifies referees in production today, and plugs straight into your application system. Three ways to put it to work: a *monthly partnership* that includes the modules I build for you, a flat annual license, or own it later — with me building it into your multi-sport platform.

$24,000

= $2,000/month (after a one-time **$8,000 startup**) — a running, supported platform **plus the modules I build for you** each month. Predictable to budget, and it grows with the library we build, not a user count to chase. Prefer one fixed number or to own it outright? A **flat $24,000/yr** (setup included) or **$72,000 to own**, with every license dollar credited, are both on the table.

Download PDF

THE OFFER — OMS · RECOMMENDED

A monthly partnership

Not rent for software — a working, supported platform **plus the modules I build for you** every month. You get visible output you can budget to the dollar, and I stay on as your technical partner. No programmer needed on your side.

RECOMMENDED

Monthly retainer

Platform, support, and modules built for you — one predictable number.

$2,000 / month

Startup fee (one-time)	**$8,000**
Platform, hosting & support	**Included**
Modules I build each month	**Up to 4**
Ramp — first 2–3 months	**$1,000/mo**
Then	**$2,000/mo**
Video hosting (Bunny)	**At cost**

A one-time $8,000 startup (branding, integration, initial library), then about $24,000/yr at the full rate — roughly 48 modules a year plus a live, supported platform. Start lower while we build the library, step up as it grows.

Build menu — extra modules

Anything beyond the monthly modules, at a flat price you know up front.

$200 / standard module

Standard (reading + quiz)	**$200**
Rich (video, interactions)	**$400**
Convert an existing test	**$350**
Bundle of 10 or more	**15% off**
Custom work beyond the menu	**$65/hr**

Flat prices so you always know the cost before I start; the $65/hr basis covers anything custom. Every module exports for in-person use too.

Why this fits: your cost is predictable and tied to **tangible monthly deliverables**, not a user count you have to chase — and it scales as the Zite integration drives adoption and you add sports and modules.

THE OFFER — OMS · FIXED-PRICE ALTERNATIVES

Prefer a fixed price? Two flat alternatives

If you'd rather pay one fixed number up front than a monthly retainer, the same complete OMS platform — your branded referee portal, the modules, the signed integration, certificates and reporting — is available at a **flat annual price with no per-official fees**. License it now, or own it later. Both are optional alternatives to the monthly partnership; buying is never required.

License

Exclusive use across your sports. I keep ownership and stay on to build.

$24,000 / year, all-in

Year one (setup + integration included)	**$24,000**
Renewal — up to 7,500 officials	**$24,000/yr**
Renewal — up to 15,000 officials	**$30,000/yr**
Per-official fees	**None**
Video hosting (Bunny)	**At cost**
Extra modules (optional)	**See build menu**

Flat and predictable; ownership stays with GetMatchReady. Platform only — builds are à la carte from the menu. Prefer builds bundled in each month? That's the monthly partnership above.

RECOMMENDED

License-to-Own

Everything in License, plus a price to own it locked in from day one.

$48,000 left to own after year one

Buy any time after	**Month 12**
Purchase price to own	**$72,000**
Year-one license (credited)	**$24,000**
License fees credited	**100%**
Obligation to buy	**None**

A year to confirm it works, with the price to own locked in and every license dollar credited.

My recommendation: License-to-Own. You license it for a full year with **no obligation to buy**, and every license dollar credits toward owning it — so if you buy after year one, $48,000 completes the purchase.

What "own it" includes: the GetMatchReady platform license, your branded OMG/OMS portal, the courses you build on it, and the signed integration to run it independently. It does not include third-party services, content provided by others, or the shared codebase GetMatchReady maintains for its other clients.

Exclusivity & scope. Exclusive to OMG/OMS within officials and referee education, for your sports and markets only. NCYSA and NCSRA are separate and excluded, and exclusivity does not cover organizations GetMatchReady already serves. Added sports and custom build-outs are optional, scoped and priced per project — not an open-ended commitment.

THE OFFER — OMG EVENTS

Short event lessons for OMG / ECNL

A lighter tier for the 2–3 minute event lessons — how to apply, how to fill out the form, expectations — built in minutes with the AI course builder and gated into your event application flow. For OMG's high-volume, short-form use a **flat tier is usually the better fit**, but the same **monthly partnership** (platform plus the modules I build you) is available if you'd rather bundle the builds.

OMG Events

Short-form event education, same platform and integration.

$6,000 / year

Up to 7,500 learners / year	**$6,000/yr**
Up to 15,000 learners / year	**$9,000/yr**
Setup & integration	**Included**
AI course builder	**Included**
Video hosting (Bunny)	**At cost**
Per-learner fees	**None**

Can run under a separate OMG Institute entity if you prefer — same contract framework. Can be billed monthly (~$500/mo).

Why it fits

Built for fast, high-volume event onboarding.

- ✓ Build a lesson in minutes — type the topic, the AI drafts the course.
- ✓ Completions post straight back to the applicant's profile in your system.
- ✓ Same low, at-cost video hosting as the OMS tier.
- ✓ Flat tiers — the price only steps up if your volume grows a lot.

OMS and OMG are the same organization, covered under one agreement with two tiers. Pick one or both; the platform, integration and hosting are shared. OMG can also run on the **monthly partnership**, and per-module building is available the same way as for OMS.

WHY NOW

The complete system, for less than any other path

OMS does not just need a SCORM player. It needs the whole system: a branded referee portal, the modules, the signed integration, certificates and reporting. Here is what that complete system costs over three years at your scale, every way you could get it, and who owns it at the end. This compares the **fixed-price** path; the monthly partnership delivers the same value as platform + modules across the year, starting lower while the library is built. GetMatchReady is the only turnkey option you can own — and it is running now.

PATH TO THE COMPLETE SYSTEM	3-YEAR COST	OWNS IT AT THE END
SCORM Cloud player, plus building the rest	~$70,000 to $130,000	No
Enterprise LMS (Docebo, Absorb) + integration	~$60,000 to $120,000	No
Build it all in-house	~$120,000 to $200,000	Yes, after 6+ months
GetMatchReady license (3 yr)	**~$72,000**	No (convertible)
GetMatchReady, own after year one	**~$72,000**	**Yes, live today**

GetMatchReady is the **complete system, live today**, for less than any way to build or assemble it, and it is the only turnkey option you can own. The **$2,000/month partnership** bundles a dedicated builder and ongoing modules, which no rented service includes.

The "complete system" means the portal, the integration, certificates and reporting — not just a SCORM player. SCORM Cloud, enterprise LMS and in-house figures are market estimates for roughly your scale (≈6,000 officials, growing), not vendor quotes, and most of their cost is building and running the surrounding system, not per-user fees. GetMatchReady figures are firm: **$24,000/yr** — whether as the $2,000/month partnership (platform + modules built for you) or a flat annual license (platform only, setup included) — or $72,000 to own, with year-one license credited.

HOSTING

The video bill stays small

You asked how the video hosting works and what it costs. Short answer: it's fully automatic, and it's pennies.

How it works — fully automated

- ✓ **Wired into Bunny's API.** The moment a video is added, GetMatchReady uploads it to Bunny and serves it from a global CDN — no copying embed codes, no linking by hand, nothing to maintain.
- ✓ **No broken links, no permission walls.** Because we host the file, it always plays inline, full screen, and resumes — unlike a Vimeo or YouTube link, which depends on the owner's embed settings and can simply refuse to play.
- ✓ **Fast everywhere.** Modules load quickly from the nearest edge; most delivery is already served from cache.
- ✓ **Billed at actual cost, no markup.** Tracked per organization — you pay Bunny's rate, nothing added.

What it actually costs

Bunny's rate is **$0.01/GB** standard, or **$0.005/GB** on the high-volume video tier. For reference, our own account delivered **8 GB last month for 8 cents.**

10-min lesson × 500 views	**~$0.75**
30-min video × 500 views	**~$2.25**
A full year, ~6,000 officials	**~$30–60**
Growth, ~15,000 officials	**~$75–150**

Cost — per GB delivered

Bunny CDN (what we use)	**$0.005–0.01**
AWS CloudFront	**~$0.085**
Vimeo / typical hosted video	**$500–1,900+/yr plan**

Bunny runs roughly **8–10× cheaper** than AWS, and there's no fixed monthly plan — you pay only for what's watched.

The real difference: it's automated

Bunny is wired into the platform through its API. Add a video and it's uploaded, hosted, and live automatically — nothing to link, nothing that breaks.

Vimeo and YouTube are just links. They depend on the owner's embed settings, can refuse to play on your domain, and have to be managed by hand. We hit exactly that with a US Soccer clip. Self-hosting on Bunny removes all of it — your video always plays, inline, everywhere.

At your scale the dollars are tiny either way — **tens of dollars a year, not thousands.** The win is the **automation**: upload once, it's live everywhere, nothing to maintain and nothing to break.

Video sizes are estimates; per-GB rates are published rates (Bunny, AWS CloudFront). Vimeo figure is a typical paid-plan range. Hosting is passed through at actual cost (storage and CDN usage) — an estimate that scales with video watched, not a cap.

RUNNING COST AT SCALE

What it costs to run — at 10,000 and 30,000 users

So there are no surprises as you grow, here is the actual infrastructure cost to operate the whole platform at scale. The app and database are covered by your retainer; video is passed through at cost. Even at 30,000 users it is a few hundred dollars a month — a small fraction of the fee.

SCALE	APP HOSTING (RENDER)	DATABASE (FIRESTORE)	VIDEO (BUNNY, AT COST)	≈ TOTAL / MONTH
Today (hundreds of users)	~$25	free–$10	~$1–5	**~$30–40**
~10,000 active users	~$85	~$50	~$10	**~$150**
~30,000 active users	~$175–250	~$150	~$30	**~$400**

> Running the full platform even at **30,000 users is roughly $5,000/year** — covered within the retainer, with video billed at actual cost. You scale the instance **up** as you grow; there is no re-platforming and nothing to rebuild.

Estimates from published pricing (Render, Google Firestore, Bunny CDN), not quotes; actual cost tracks real activity. At the tens-of-thousands level the app's progress data moves to on-demand loading — a small, already-scoped change — so the instance size stays modest.

INTEGRATION

Plugs straight into your application system

Education shouldn't be a separate island. GetMatchReady connects to your event application and assignment system (Zite) so training becomes part of the pipeline — not another thing to chase.

1. An official applies to an event and is accepted in your system.
2. Your system sends them to the required GetMatchReady course with a signed launch link.
3. They complete it — real watch time, pass/fail, score — and earn their certificate.
4. GetMatchReady fires a signed completion webhook back; it's marked done on their profile.
5. Your assigners and event managers see who's cleared, automatically.

The launch link in and the completion webhook out are built and live today — no JavaScript for your team to write. This is the same loop US Soccer is working toward; you can have it first, and tied into assignment the way nobody else is.

↗ **Technical one-pager for your developer →**

WHAT YOU GET

A finished platform, not a starting point

Everything below is built and running today, and the full loop, from a signed launch to a completed module to the result posted back into your system, was tested end to end with your team. These are not roadmap promises.

- **AI course builder**
  Type a topic ("2026/27 Law Changes, 6 lessons, this video"), and it drafts the whole course — reading, slides, and a graded quiz — ready to edit and publish.
- **Export anywhere (SCORM / web)**
  Publish natively here, or export any course as SCORM 1.2/2004 or a standalone web page to use in another system. No lock-in.
- **Full upload automation**
  Your system sends new SCORM lessons to the platform through our API. We unpack, host, and serve them. Nothing sent by hand.
- **Preview before go-live**
  New lessons arrive as drafts you preview with a launch link, and go live only when you choose.
- **Genuine completion**
  Real watch and finish time. Pass, fail, and score, not a click-through.
- **Resume anywhere**
  Officials pick up exactly where they left off, on any device.
- **Video on a global CDN**
  Large modules load fast; video is offloaded automatically.
- **Certificates built in**
  Issued on completion, branded per organization.
- **No JavaScript for your team**
  A signed launch link in, a signed completion webhook out.
- **Hosting billed at cost**
  Storage and CDN usage are tracked per organization and passed through at actual cost, no markup.
- **Reconcile any time**
  Pull completion status on demand to match your records, and every upload is logged.
- **A dedicated builder**
  Me, growing it into basketball, football, and beyond.

Several of these — self-service upload automation, the AI course builder, a dedicated builder, and per-organization cost tracking — are capabilities enterprise vendors bill as paid add-ons. Here they are included.

Cost figures are estimates from published pricing and typical build-and-run costs, checked September 2026. Sources: Rustici SCORM Cloud pricing, Bunny CDN pricing, AWS CloudFront pricing.

Prepared by Jeremy Layton Brown Smith, GetMatchReady. Pricing valid through November 30, 2026. This proposal is for discussion and is not binding. Final terms are subject to a signed agreement. Comparison figures are estimates, not vendor quotes. Confidential and intended only for Officials Management Group / Officials Management Systems.
